"Soluble polypeptide fractions of the LAG-3 protein; production method, therapeutic composition, anti-idiotype antibodies"

ABSTRACT

The invention relates to a soluble polypeptide fraction consisting of all or part of at least one of the 4 immunoglobulin type extracellular domains of the LAG-3 protein (amino acid 1 to 159, 160 to 239, 240 to 330 and 331 to 412 of sequence SEQ ID No. 1), or of a peptide sequence derived from these domains by replacement, addition and/or deletion of one or more amino acids, and which possesses a specificity at least equal to that of LAG-3 for its ligand.
