

ABSTRACT**INK JET PRINTING PAPER**

Ink-jet printing paper is produced by treating a base paper with a composition comprising an admixture of:

- (a) a cooked and/or chemically-modified starch
- (b) a hydrophilic polymer other than a starch, typically polyvinyl alcohol; and
- (c) a hydrophobic polymer, typically a latex

The paper also exhibits good toner adhesion when imaged by electrophotographic processes as used in laser printers, xerographic copiers etc.
