ABSTRACT

A computer device for effecting an authentication procedure associated with a service provider or an application, including a plurality of sensors; and one or more processors in communication with the sensors and non-transitory data storage including, stored thereon, a plurality of instructions which, when executed, cause the one or more processors to perform the steps of (a) receiving an authentication procedure request; (b) determining a hierarchy of authentication processes for the authentication procedure; (c) selecting an authentication process from the hierarchy of authentication processes; and (d) executing the authentication process.
