

METHOD, DEVICE AND SYSTEM FOR RECORDING MULTIMEDIA DATA

ABSTRACT

According to the embodiment of the present invention, a distribution device does not need to
5 process and distribute all multimedia data and only needs to decide multimedia data identification
information corresponding to multimedia data that needs to be recorded and send the multimedia
data identification information to a recording device, and the recording device identifies the
multimedia data corresponding to the multimedia data identification information and records the
multimedia data, so that the amount of data that the distribution device processes is small, thereby
10 improving the efficiency of recording multimedia data.
