

ABSTRACT

Implementations of this application provide a feedback information transmission method and apparatus and a communications device. The method includes: receiving, by a first node, a group of target information sent by a second node, where each piece of target information in the group of target information includes a first information field and a second information field, the first information field includes M bits of feedback information for a group of data channels or a group of transmission resources, M is a positive integer, and the second information field is used for determining a correspondence between the first information field and the group of data channels or the group of transmission resources.
