ABSTRACT

METHODS AND SYSTEMS FOR FACILITATING ADMISSIONS

Methods and systems for granting or regulating attendee access to an event or location are provided. A method for regulating attendee access to an event or location comprises receiving a first identifier on an electronic device of a checker that regulates access to the event or location. The first identifier can comprise at least one graphical item, such as a color. In an example, the color is an image color or a background color. Next, a second identifier on an electronic device of an attendee is reviewed by the checker. The second identifier can comprise at least graphical item. The attendee is granted access to the event or location if the first identifier matches the second identifier.
