(54) Title: SYSTEM AND METHOD FOR CONFIGURING ACCESS TO ELECTRONIC MAILBOXES

(57) Abstract: A system and method for configuring access to an electronic mailbox (See figure 1) based on limited configuration parameters received from a user (See figure 1, 10). A database stores configuration conventions for a mail domain (See figure 1, 10d). A mailbox interface module receives configuration information from a user that is limited in the configuration parameters required for accessing the electronic mailbox (See figure 1, 10c). The module retrieves configuration conventions for the mail domain from the database (See figure 1, 11) and generates sets of potentially valid configuration parameters based on the retrieved configuration conventions and user supplied configuration information for accessing the mailbox (See figure 1, 10).
