A B S T R A C T

A composite sheet includes a base layer 7 and a surface layer. A surface layer is comprised of continuous fibers 8a and extends along a longitudinal axis C - C of the composite sheet 1. The surface layer is attached to at least one surface of the base layer 7 along a first attaching lines 5A extending at intervals in one half region of the surface layer defined by the longitudinal axis C - C and a second attaching lines 5B extending at intervals in another half region of the surface layer. The first and second attaching lines 5A, 5B are extending in a direction intersecting the longitudinal axis C - C.
