ABSTRACT

Disclosed are a massage module and a massage waist belt. The massage module includes a flexible substrate, a first massage head, and a battery. The flexible substrate has a working side. The first massage head is disposed on the flexible substrate, and the battery is disposed on the flexible substrate. In the massage module provided in the present disclosure, both the battery and the first massage head are disposed on the flexible substrate, so that the massage module not only has good portability, but also has unrestricted usage range without having to be connected to a power socket via a cable.
