GAME MANAGEMENT SYSTEM

ABSTRACT

A game management system (101) for managing a casino game played on a gaming table (4) of a casino facility includes: a camera (2) which photographs a bet chip (9) to obtain an image; a control device (14) which specifies a bet amount for each player position on the gaming table (4) on the basis of a position, a type, and the number of sheets of the chip (9) in the image, a player number determination device which determines the number of players participating in a game on the gaming table (4), and a management control device (60) which determines a recommended value of a minimum bet amount for each gaming table on the basis of information on a bet amount specified by the control device (14) and information on the number of players determined by the player number determination device.
