

ABSTRACT

Disclosed in the present application are an SN synchronization method, apparatus and device for a multicast broadcast service, and a readable storage medium. The method comprises: obtaining a first air interface SN for receiving a first multicast broadcast service in a first cell and a second air interface SN for receiving the first multicast broadcast service in a second cell; and sorting data packets of the first multicast broadcast service according to the first air interface SN and the second air interface SN, wherein the first air interface SN and the second air interface SN are located in the same SN set, and the first air interface SN and the second air interface SN are at least partially different.
