

ABSTRACT**A MODULAR BUILDING AND A METHOD OF CONSTRUCTION THEREOF**

A novel building suitable for habitation built using novel construction modules and structure. The building comprising one or more vertical supports; a room module secured to the one or more vertical supports by a securing mechanism; wherein most or all of the weight of the room module is borne by the one or more vertical supports. The room module is lift and inserted into a space between the vertical supports horizontally. This allows work on the top of the building such as extension of the vertical supports to continue without being disturbed by the installation of the room module.

Figure 6 to be published with the abstract.
