CLAIMS

~~What is claimed is:~~

1. A ~~data processing~~ method for sending path information in a virtual scene, ~~performed by a computer device, the method~~ comprising:

displaying a path planning interface in a first terminal, wherein the path planning interface comprises a first minimap of the virtual scene and is configured to plan a path of a target virtual object, object icons of respective first virtual objects are displayed on the first minimap, the first virtual objects belong to a same camp as a virtual object controlled by the first terminal, and the target virtual object is one of the first virtual objects;

determining, in response to reception of a click operation on a first object icon in the first minimap, that one of the first virtual objects corresponding to the first object icon is the target virtual object;

generating, in response to reception of a sliding operation in the first minimap, path information of the target virtual object in the virtual scene based on the sliding operation; and

sending the path information to a second terminal that controls the target virtual object, so that the second terminal displays the path information on a second minimap that is superimposed on a virtual scene interface displayed in the second terminal.

~~receiving an operation instruction, the operation instruction being triggered by a route drawing operation; the route drawing operation being performed on a target virtual object on a second minimap; the target virtual object being a virtual object controlled by a first terminal; the second minimap being displayed by a second terminal;~~

~~generating path information of the target virtual object in the virtual scene based on the operation instruction; and~~

~~transmitting the path information to the first terminal, so that the first terminal displays a path trajectory corresponding to the path information on a first minimap displayed by the first terminal.~~

~~2. The method according to claim 1, wherein in a case that the computer device is the second terminal, before the receiving an operation instruction, the method further comprises:~~

~~displaying a path planning interface on a screen of the second terminal, the path planning interface comprising the second minimap.~~

~~3~~2. The method according to claim ~~2~~1, wherein the displaying a path planning interface in a first

terminal comprises:

displaying the path planning interface in the first terminal in response to reception of a ~~first~~ predetermined operation for the target virtual object.

4~~3~~. The method according to claim ~~3~~2, wherein the displaying the path planning interface in the first terminal in response to reception of a ~~first~~ predetermined operation for the target virtual object comprises:

displaying the path planning interface in the first terminal in a case that a signal trigger control corresponding to the target virtual object is superimposed on a first virtual scene picture ~~displayed on the second terminal~~ and in response to reception of a trigger operation on the signal trigger control, the signal trigger control ~~displaying related information~~comprising an avatar of the target virtual object~~.~~

~~5. The method according to claim 3, wherein the displaying the path planning interface in response to reception of a first operation for the target virtual object comprises:~~; or

displaying the path planning interface in the first terminal in response to reception of a trigger operation on the target virtual object in the virtual scene.

6~~4~~. The method according to claim ~~3~~2, further comprising:

displaying an object icon of the target virtual object on the ~~second minimap~~ first minimap based on a position of the target virtual object in the virtual scene.

7~~5~~. The method according to claim ~~2~~1, wherein the displaying a path planning interface in a first terminal comprises:

displaying the path planning interface in the first terminal in response to reception of a path planning trigger operation~~, the path planning trigger operation comprising a click operation on the second minimap, or a click operation on a first trigger control other than the second minimap~~.

~~8. The method according to claim 1, wherein the target virtual object is one of first virtual objects, the first virtual objects being on the same camp as a virtual object controlled by the first terminal; object icons of the first virtual objects being displayed on the second minimap; and the route drawing operation being performed on one of the object icons of the target virtual object.~~

9~~6~~. The method according to claim ~~8~~1, further comprising:~~wherein the route drawing operation comprises a sliding operation started from a first object icon in the second minimap; and~~

~~the generating path information of the target virtual object in the virtual scene based on the operation instruction comprises:~~

determining, in response to reception of a sliding operation starting from the first object icon in the first minimap, one of the first virtual objects corresponding to the first object icon as the target virtual object ~~based on the operation instruction~~; and

generating the path information of the target virtual object in the virtual scene based on the sliding operation.

~~10~~7. The method according to claim ~~8~~5, wherein the ~~route drawing~~path planning trigger operation comprises a click operation on ~~a first object icon in the second minimap, and a sliding operation in the second minimap~~ the first minimap in the first terminal, or a click operation on a predetermined trigger control other than the first minimap~~; and~~

~~the generating path information of the target virtual object in the virtual scene based on the operation instruction comprises:~~

~~determining one of the first virtual objects corresponding to the first object icon as the target virtual object based on the operation instruction; and~~

~~generating the path information of the target virtual object in the virtual scene based on the sliding operation~~.

~~11~~8. The method according to claim ~~8~~1, wherein before the generating, in response to reception of a sliding operation in the first minimap, path information of the target virtual object in the virtual scene based on the ~~operation instructions~~sliding operation, the method further comprises:

displaying the object icons of the first virtual objects in a highlighted manner in the first minimap~~second minimap~~.

~~12~~9. The method according to any one of claims 1 to ~~11~~8, wherein the first minimap~~second minimap~~ comprises a highlighted region, the highlighted region ~~in the second minimap~~ corresponding to an obstacle in the virtual scene.

~~13~~10. A ~~data processing~~ method for sending path information in a virtual scene, ~~performed by a first terminal, the method~~ comprising:

displaying a virtual scene interface~~, the virtual scene interface being configured to display a scene picture of the virtual scene~~ in a second terminal, a second minimap being superposed on the virtual scene interface;

receiving path information, wherein the path information is related to a target virtual object and is generated based on a sliding operation in a first minimap that is contained in a path planning interface displayed in a first terminal, the path planning interface is configured to plan a path of the

target virtual object, object icons of respective first virtual objects are displayed on the first minimap, the first virtual objects belong to a same camp as a virtual object controlled by the first terminal, and the target virtual object is controlled by the second terminal, and is one of the first virtual objects belonging to the same camp as the virtual object controlled by the first terminal; and

displaying the path information on the second minimap~~displaying a first scene picture in the virtual scene interface, a first minimap of the virtual scene being superimposed on the first scene picture; and~~

~~displaying a path trajectory corresponding to a route drawing operation in the first minimap, the route drawing operation being performed on a target virtual object on a second minimap comprised in a path planning interface; the path planning interface being displayed in a second terminal; the second terminal being configured to control another virtual object other than the target virtual object; the target virtual object being a virtual object controlled by the first terminal~~.

~~14~~11. The method according to claim ~~13~~10, wherein the displaying the path information on the second minimap~~displaying a path trajectory corresponding to a route drawing operation in the first minimap~~ comprises:

displaying path prompt information ~~on the first scene picture~~in the virtual scene interface, the path prompt information being used for prompting ~~the first terminal after the second terminal receives the route drawing operation~~ existence of the path information sent by the first terminal; and

displaying the path ~~trajectory~~ information on the second minimap~~first minimap~~ on reception of a confirmation operation for the path prompt information.

~~15~~12. An ~~data processing~~ apparatus for sending path information in a virtual scene, comprising:

~~an instruction receiving module, configured to receive an operation instruction, the operation instruction being triggered by a route drawing operation; the route drawing operation being performed on a target virtual object on a second minimap; the target virtual object being controlled by a first terminal; the second minimap being displayed by a second terminal;~~

~~a path generation module, configured to generate path information of the target virtual object in the virtual scene based on the operation instruction; and~~

~~a path transmission module, configured to transmit the path information to the first terminal, so that the first terminal displays a path trajectory corresponding to the path information on a first minimap displayed by the first terminal.~~an interface display module, configured to display a path planning interface in a first terminal, wherein the path planning interface comprises a first minimap of the virtual scene and is configured to plan a path of a target virtual object, object icons of respective

first virtual objects are displayed on the first minimap, the first virtual objects belong to a same camp as a virtual object controlled by the first terminal, and the target virtual object is one of the first virtual objects;

a path generation module, configured to determine, in response to reception of a click operation on a first object icon in the first minimap, that one of the first virtual objects corresponding to the first object icon is the target virtual object, and generate, in response to reception of a sliding operation in the first minimap, path information of the target virtual object in the virtual scene based on the sliding operation; and

a path display module, configured to send the path information to a second terminal that controls the target virtual object, so that the second terminal displays the path information on a second minimap that is superimposed on a virtual scene interface displayed in the second terminal.

~~16. A data processing apparatus in a virtual scene, comprising:~~

~~a scene display module, configured to display a virtual scene interface, the virtual scene interface being configured to display a scene picture of the virtual scene;~~

~~a picture display module, configured to display a first scene picture in the virtual scene interface, a first minimap of the virtual scene being superimposed on the first scene picture; and~~

~~a path display module, configured to display a path trajectory corresponding to a route drawing operation in the first minimap, the route drawing operation being performed on a target virtual object on a second minimap comprised in a path planning interface; the path planning interface being displayed in a second terminal; the second terminal being configured to control another virtual object other than the target virtual object; the target virtual object being a virtual object controlled by a first terminal.~~

~~17. The apparatus according to claim 16, wherein the path display module comprises:~~

~~a prompt display submodule, configured to display path prompt information on the first scene picture, the path prompt information being information used for prompting the first terminal after the second terminal receives the route drawing operation; and~~

~~a path display submodule, configured to display the path trajectory on the first minimap on reception of a confirmation operation for the path prompt information.~~

~~18~~13. A computer device, comprising a processor and a memory, the memory storing at least one instruction~~, at least one program, a code set, or an instruction set~~, the at least one instruction~~, the at least one program, the code set, or the instruction set~~ being loaded and executed by the processor

to implement the ~~data processing~~ method for sending path information in a virtual scene according to any one of claims 1 to 1~~4~~1.

~~19~~14. A computer-readable storage medium, storing at least one instruction~~, at least one program, a code set, or an instruction set~~, the at least one instruction~~, the at least one program, the code set, or the instruction set~~ being loaded and executed by a processor to implement the ~~data processing~~ method for sending path information in a virtual scene according to any one of claims 1 to ~~14~~11.

15~~20~~. A computer program product, comprising ~~at least one computer program~~computer instructions, and the ~~computer program~~computer instructions being loaded and executed by a processor to implement the~~ data processing~~ method for sending path information in a virtual scene according to any one of claims 1 to ~~14~~11.
