

ABSTRACT

Disclosed are a video interaction method and apparatus, an electronic device, and a storage medium. The video interaction method comprises: when a recommended video of a target object is played back to a first time node, displaying an interaction window at a preset position of a video play back page, and continuing to play back the recommended video; receiving an object determination operation acting in the interaction window; displaying, in the interaction window, first object information of an object to be received, said object being related to the target object; receiving a receiving operation for said object; and displaying a target page for a user to receive said object.
