What is claimed is:

1. A method of fabricating a wall panel, the method comprising:

casting a first layer on a mold, the first layer including an engineered cementitious composite;

overlaying a second layer on the first layer, the second layer includes an autoclaved aerated concrete and is arranged to provide at least one cavity; and

dispensing a material into the at least one cavity to form a rib which traverses the second layer and is bonded to the first layer, wherein the material includes the engineered cementitious composite.

2. The method of claim 1, further comprising dispensing the material onto the second layer to form a third layer overlaying the second layer, wherein the at least one rib is bonded to the first layer and the third layer.

3. The method of claim 1, further comprising:

arranging a rigid member at an end of the wall panel; and

dispensing the material onto the second layer to form a third layer overlaying the second layer, wherein the at least one rib is bonded to the first layer and the third layer, and interposed therebetween.
