(54) Title: SYSTEM, APPARATUS AND METHOD FOR PROVIDING END TO END SOLUTION FOR NETWORKS

FIG. 14

(57) Abstract: A method, apparatus and system for assisted code provisioning of an end to end network includes automatically providing a first interface menu for enabling an initial user input of at least one of configuration information and application logic information for devices of the end to end network and continuing to automatically provide subsequent interface menus for receiving configuration information and application logic information for all devices and interconnections required to establish the end to end network in which a subsequent interface menu provided for input can be dependent upon an input made to a previously provided interface menu, and an order of interface menus automatically provided guides a user through a provisioning of the end to end network without the need to enter programming code. Programming code can be automatically generated from the input information and deployed for each of the devices required to establish the end to end network.
