

Claims:

1. A solid flavour composition, comprising a plurality of individual components at least one of which is a flavour-providing substance and at least one of which is an auxiliary ingredient,
5 in which all amorphous components are present as particulate aggregates.
2. A method of preparing a solid flavour composition comprising a plurality of individual components, at least one of which is a flavour-providing substance and at least one of which is an auxiliary component, comprising the formation of particulate aggregates of all
10 amorphous components, followed by the blending of the aggregates with the remaining components.
