

ABSTRACT

TRANSPORT VEHICLE, IN PARTICULAR FOR A PORT

5 The invention relates to a transport vehicle (1), comprising a chassis (2) for receiving at least one container (C ; C') and means (3 ; 4) for rolling over the ground. Said vehicle (1) is characterized in that it comprises : a front module (5) having a front structure (50) and a rolling means (3) ; a rear module (6) having a rear structure (60) and a rolling means (4) ; an intermediate module (7), between the front (5) and rear (6) modules, coupled to said modules (5 ; 6), and comprising an intermediate structure (70) extending at a lower level than the front (50) and rear (60) structures ; a means (8) for laterally supporting at least one container (C; C'), having a separation therebetween at least equal to the dimensions of such a container (C ; C'), and at least one portion of which defines a lateral structure (9) partially constituting the chassis (2) of the vehicle
