

Title : ROLLING DOOR

Abstract

The present invention is concerned with a panel suitable for use in a rolling door (20) wherein the panel
5 consists of a body member (21) having a bracket member (27, 28) mounted on either edge (53, 54) and a flange (49, 52) extending from each said bracket member wherein said flange (49, 52) includes an engagement portion (47, 48) having a curved cross-section with a curvature
10 suitable to engage a flange extending from an adjacent panel. It is desirable that the body member is made of a transparent plastics material.
