

ABSTRACT

Access control method and system

The invention describes an access control method for a spectator to a facility, wherein a
5 spectator's mobile device (1) has installed an application configured to communicate with a
validation server (2), and wherein said validation server (2) is configured to communicate
with some automatic access gates (3) to the facility. The method comprises the calculation
by applying an access code (EC) that includes a first measurement of a physical variable
carried out by a sensor of the mobile device (1) and the calculation by the access gate (3)
10 of an validation code (VC) that includes a second measurement of the physical variable
carried out by a sensor 10 located in the facility. Access is only granted if the access code
(EC) coincides with the validation code (VC).
