METHOD OF COLLECTING EXPENSE DATA

ABSTRACT OF THE DISCLOSURE

A method of collecting expense data of a company comprises scanning an image of a record of expenses from a user, uploading the image on a messaging application, performing optical character recognition on the image to identify information about the image, determining whether the information obtained includes all necessary information, and if all necessary information is not present in the information, then using a chatbot to prompt the user on the messaging application to provide missing information needed to obtain all necessary information, and assigning expenses to a particular trip of a vehicle. The vehicle may be an aircraft.
