

{Abstract}

A portable circulating conveyor apparatus is provided in which tension adjustment of a crescent chain is easy and positive, and the size of the tension adjusting margin is not restricted.

A circulating conveyor track unit (2) constituting a circulating conveyor track includes a straight conveyor track section (10), a drive unit (20) including a curved conveyor track section (21) bent and connected to one side of the straight conveyor track section (10), a driving mechanism (22) and a base (23), and a driven unit (30) including a curved conveyor track section (31) bent and connected to the other side of the straight conveyor track section (10), a driven mechanism (32) and a base (33), wherein the driven unit (20) is relatively movably connected in the direction of a straight conveyor track relative to the straight conveyor track section (10), and the driven unit (30) is provided with a clamper device (50) that prevents or allows relative movement of the curved conveyor track section (31) relative to the base (33).
