FLOATING STRUCTURE

ABSTRACT

To provide a slim floating structure wherein natural gas processing equipment is positioned while ensuring a positioning space for LNG tanks that store liquefied natural gas. A floating structure comprising: tanks transferred from an existing LNG cargo ship or an existing floating structure, and positioned continuously in a lengthwise direction of a hull structure; and natural gas processing equipment positioned on at least one side among both sides of the tanks in a width direction of the hull structure, wherein the natural gas processing equipment is positioned on the inside in the width direction of the hull structure.
