LANGUAGE - INFORMATION PROVIDING APPARATUS

ABSTRACT OF THE DISCLOSURE

A language-information providing apparatus is arranged such that phrases having identical meanings are stored for each address to establish correspondence among a plurality of languages. The user selects a predetermined language by means of a language selecting button 16, and selects a particular phrase by means of up/down left/right scroll buttons 18. On the basis of this selection, the particular phrase in the particular language is read out from a storage means 23, and is displayed on a display 12, and an address number of this phrase is transmitted to a remote place by making use of a telephone line or the like. A receiver in the remote place outputs a received phrase in a particular language from its storage means 23 on the basis of the received phrase number and the designation of the particular language.
