

CLAIMS

WHAT ARE CLAIMED:

1. A brush for cleaning a surface, comprising:
a center core; and
cleaning material, around the center core, comprising nodules,
wherein a first nodule density of a first region of the cleaning material is different than a second nodule density of a second region of the cleaning material.
2. The brush of claim 1, wherein a nodule density is smaller at a longitudinal center of the brush than at a longitudinal end of the brush.
3. The brush of claim 1, wherein the nodules form a substantially helical pattern on the cleaning material.
4. The brush of claim 1, wherein the nodules form a substantially grid pattern on the cleaning material.
5. The brush of claim 1, wherein a nodule density is substantially symmetric about a longitudinal center of the brush.
6. The brush of claim 1, wherein a nodule pattern is substantially symmetric about a longitudinal center of the brush.
7. The brush of claim 1, wherein the nodules are formed as a part of the cleaning material.
8. The brush of claim 1, wherein the nodules are attached to the cleaning material with an adhesive.
9. The brush of claim 1, wherein at least one nodule has a different shape than another of the nodules.
10. The brush of claim 1, wherein the brush comprises elongated nodules near a longitudinal center of the brush.

11. The brush of claim 1, wherein a diameter of a first cross-section of the brush is greater than a diameter of a second cross-section of the brush.
12. The brush of claim 1, wherein a cross section of the brush is substantially circular.
13. The brush of claim 1, wherein the cleaning material is friction fit over the center core.
14. The brush of claim 1, wherein the cleaning material is coupled to the center core with an adhesive.
15. The brush of claim 1, wherein at least some of the nodules are placed in a pattern to move cleaning fluid toward a longitudinal end of the brush, wherein the cleaning fluid is provided to one or both of the brush and the surface at least during a cleaning process of the surface.
16. A brush for cleaning a surface, comprising:
a center core; and
cleaning material, about the center core, comprising nodules,
wherein first nodules at a first region of the brush have a first shape and second nodules at a second region of the brush have a second shape.
17. The brush of claim 16, wherein one or both of the first region and the second region comprises first nodules having the first shape and the second nodules having the second shape.
18. The brush of claim 16, wherein the first region is closer to a longitudinal center of the brush than the second region.
19. The brush of claim 16, wherein the first shape is larger than the second shape.
20. The brush of claim 16, wherein at least one of the first nodules and the second nodules are placed in a pattern to move cleaning fluid toward a longitudinal end of the brush, wherein the cleaning fluid is provided to one or both of the brush and the surface at least during a cleaning process of the surface.
