SAFETY BARRICADE AND/OR GUARDING SYSTEM

Abstract

A barricade system (100) comprising at least one clip (102) having a first engagement formation (104A, 105A) adapted to secure the clip (102) to a fixed structure, the clip further having a second engagement formation (104C, 105G). The system (100) includes a joiner element (106) having a third engagement formation (106A) located on a first side, and a fourth engagement formation (106B) located on an opposing second side, the third engagement formation (106A) being adapted to engage the second engagement formation (104C, 105G) to secure the joiner element (106) to the clip (102). The system (100) includes at least one mesh panel (101) and a stopper element (107) having a fifth engagement formation (107A). The fifth engagement formation (107A) is engageable with the fourth engagement formation (106B) to secure the stopper element (107) to the joiner element (106) with a portion of the mesh panel (101) located therebwtween.
