

ABSTRACT

In a plan view, a cleaning head section (12) and a base body (13) of a cleaning tool body (11) have a planar shape with a pair of short sides (12a), (13a) at which a cleaning sheet (30) is folded back and a pair of long sides (12b), (13b) at both ends of the pair of short sides (12a), (13a). Attached sections (50) to which end portions of the cleaning sheet (30) folded back at the short sides (12a), (13a) of the base body (13) are attached each include a sandwiching lid piece (54) that is arranged and superposed on a corresponding end section, with respect to a long side direction, of the cleaning head section (12), a magnet (52) that is provided on the end section of the cleaning head section (12), and a magnetic material (53) that is provided on the sandwiching lid piece (54). Each end portion of the cleaning sheet (30) is attached between a corresponding end section of the base body (13) and a corresponding sandwiching lid piece (54) due to a magnetic force between the magnet (52) and the magnetic material (53).
