

## **CONTAINER**

### **ABSTRACT OF THE DISCLOSURE**

A container includes a first part and a second part. The first part has a through hole configured to allow a tubing to pass through. The second part is connected with the first part and has a containing space configured to allow a tip of the tubing to accommodate therein. The container has a first opening formed on the second part and communicated with the containing space. The first opening is located between the first part and the containing space.
