

**ABSTRACT****A SYSTEM, METHOD AND AN APPARATUS FOR  
SIMULATION IN A VIRTUAL REALITY ENVIRONMENT**

5

The present invention relates to a system, method and an apparatus for simulation in a virtual reality environment, more particularly the present invention relates to a system, method and an apparatus for an interactive simulation in a virtual reality environment, wherein the system comprising a station (100) for monitoring and controlling the simulation, and an apparatus (200) connected to the station (100), configured for simulating an object and for receiving instructions from the station (100) in the event of simulation via graphic user interfaces.
