

ABSTRACT

CONDUCTIVE CONTACTOR UNIT

5 A conductive contactor unit according to the present invention includes: a conductive contactor holder that houses a signal conductive contactor used in inputting and outputting a signal to and from a predetermined circuit structure, and that has a coaxial structure with the signal
10 conductive contactor; a holder substrate that has an opening for housing the signal conductive contactor; a holding member that is housed in the opening, and that has a holding hole for holding one or more of the signal conductive contactors, and has a stab that forms a hollow
15 space extending from the holding hole in a direction perpendicular to the central axis of the holding hole.
