

[Document Name]            Abstract

To provide a spout-equipped container that is excellent in hermetical-sealing performance.

The spout-equipped container includes a container 10 and a spout 12. The spout 12 includes a spout main body 20, an opening body 50 accommodated in a cylinder of the spout main body, an activating body 80 which moves the opening body, and a hermetically-sealing sheet 14 which covers an inner opening which fronts an accommodating unit in the spout main body. The opening body 50 is formed so as not to be get out of the spout main body 20, is formed so as to move toward the hermetically-sealing sheet 14, and has its center where a spout through hole 56 is formed. The hermetically-sealing sheet 14 is formed so as to be partially torn by the opening body 50 to make the accommodating unit 200 of the container 10 and an outer opening 28 of the spout main body 20 communicate with outside via the spout through hole 56 of the opening body 50, and is formed so that an accommodated substance is poured outside.
