(54) **Title:** METHOD AND SYSTEM FOR SELECTING ANSWERS IN AN ANSWER SET USING A CUSTOMIZABLE TABLE

(57) **Abstract:** A method for assisting a person in viewing results of a database query uses query parameters to obtain query results from a database. A user interface displays a table having a selector column. The selector column includes a plurality of rows, with each row representing a set of values for a parameter selectable by a user from a set of selectable parameters. The table also has a selector row that includes a plurality of columns. Each column represents a set of values for a parameter selectable by a user from a set of selectable parameters. Parameters relate to data of the database, and some are computed or derived from database fields. A parameter may be a measure of a degree to which a travel itinerary satisfies a company or managed travel bias. The table further includes selector cells, with each cell corresponding to a row and column. A user can select subsets of query results for display in an answer table by selecting a column, row, or cell of the selection table.
