

## **ACCESS CONTROL METHOD, SYSTEM, DEVICE, MEDIUM, AND PROGRAM PRODUCT**

### **ABSTRACT**

The present disclosure relates to the field of computer technology, and discloses an access control method, a system, a device, a medium, and a program product. The method includes: displaying a login authentication page of a target application in response to an operation of making a terminal device access a first network; obtaining access configuration information of the first network, wherein the access configuration information comprises a communication interface, and the communication interface is configured to detect whether an application client of the target application is installed in the terminal device; and invoking the communication interface, and displaying first prompt information in response to a failure in invoking the communication interface, wherein the first prompt information is used to prompt to install the application client. The security of a private network/dedicated network such as an enterprise office network can be improved.
