(54) Title: ANDROGENIC ACTIVITY OF EUCOMMIA ULMOIDES EXTRACTS

(57) Abstract: The present invention relates generally to a method for modulating steroidogenic activity and a composition useful for same. The present invention further relates to a composition comprising a steroidogenic modulator useful for modulating physiological processes mediated by the androgen receptor or an active form thereof or complex comprising same and/or for modulating physiological processes mediated by estrogen receptors. The composition of the present invention preferably comprises an extract of herbs or botanical or horticultural equivalents of the herbs or chemical or functional equivalents of one or more components of the herbal extract thereof.
