

ABSTRACT

The present disclosure relates to a sealing material composition including a fluoroelastomer, a silicone polymer having a vinyl group, and a crosslinking agent, a
5 sealing material that contains a crosslinked product of the sealing material composition, a gate seal for semiconductor manufacturing equipment including the sealing material, and the semiconductor manufacturing equipment. According to the present disclosure, provided are a sealing material composition that can exhibit improved 100% modulus, a sealing material that contains a crosslinked product of the sealing material
10 composition, a gate seal for semiconductor manufacturing equipment including the sealing material, and the semiconductor manufacturing equipment.
