(54) Title: VENDING MACHINE FOR HEATING FOOD AND ITS OPERATING METHOD

FIG. 2

(57) Abstract: Disclosed are a vending machine and its operation method. The vending machine comprises a main moving device and a first food supply device, the first food supply device including a first food storage module, a first food moving module and a steam heating module, the first food moving module being movably disposed between the first food storage module and the steam heating module, the steam heating module including a piercing pipe, the first food storage module being used to store and supply a first food package containing food to the first food moving module, the first food moving module being used to move to the steam heating module and allows the piercing pipe to pierce the first food package, the piercing pipe being used to output a steam into the first food package to heat the food, the first food moving module being further used to pour the heated food in the first food package to the container.
