(54) Title: SERVICE FOR AMBIENT IOT DEVICES

(57) Abstract: Example embodiments of the present disclosure relate to a BS, a core network entity, an AIoT device, methods, apparatuses, processors, and computer readable medium for a service for AIoT devices. In the solution, the BS may receive a first message from the core network entity, and the first message may indicate a type of a service associated with one or more AIoT devices. Accordingly, the base station may identify that the first message is for AIoT service, and in addition, the base station may transmit a second message to the one or more AIoT devices to initiate a procedure of the service. As such, the base station can differentiate a service of AIoT from legacy UEs, and the service for AIoT devices can be guaranteed.
