

CARD REUSE SYSTEM AND CARD REUSE METHOD

ABSTRACT

A card reuse system (100) comprises a plurality of
5 card shooters (12), an extraction device (21) that extracts
a plurality of playing cards of a predetermined number of
decks from a plurality of unused playing cards collected
from the plurality of card shooters (12), and a card
management system. The card management system comprises a
10 collected card information acquisition unit (211) that
acquires collected card information, a collection
inspection device (212) that reads ranks and suits of
actually collected playing cards, an non-extracted card
information acquisition unit (213) that acquires non-
15 extracted card information on a playing card remaining
after a new playing card package is formed, and a
management device (24) that determines whether the
collected card information matches the ranks and suits
inspected by the collection inspection device (212) and
20 determines whether the number of the formed new playing
card packages and the non-extracted card information
correspond to the collected card information.
