

## TITLE OF INVENTION: PHOTOCURABLE RESIN SHEET

## ABSTRACT

5           The present invention provides a photocurable resin  
sheet excellent in handleability, photocurability, and  
transparency. Included is a photocurable resin sheet  
containing a high molecular compound (A) and a low  
molecular compound (B), wherein an epoxy group, an oxetanyl  
10 group, and a photopolymerization initiating group are each  
individually present in the high molecular compound (A) or  
the low molecular compound (B).
