

ABSTRACT

A curable composition includes: a component (A) that is a polysiloxazane compound having a weight-average molecular weight of 3,000 to 10,000 and a number-average molecular weight of 2,000
5 to 8,000, and having a specific structure; and (B) a silicone compound having a hydrolysable silyl group or a hydroxy group.

According to the present invention, a curable composition that can form a coating having excellent water repellency and sliding property, and that also has excellent coating stability
10 in the initial working is provided.
