

3D screen printing system for printing three-dimensionally shaped structures**ABSTRACT**

- 5 A printing system (1) for printing three-dimensionally shaped structures, in particular on substrates such as circuit boards, wafers, solar cells, carrier substrates, printing tables, carrier plates, sintering plates or the like, having at least one printing device (2) which has a printhead (8), having a squeegee device (9) and a screen receptacle (10), which is associated with the squeegee device (9), for receiving a printing screen (11). According to the invention, a screen provision device (25) has at
- 10 least one screen magazine (3) for storing multiple printing screens (11) and a conveying device (4) for conveying a printing screen (11) from the screen magazine (3) to the screen receptacle (10) and from the screen receptacle (10) to the screen magazine (3).
