

ABSTRACT

GAME MANAGEMENT SYSTEM

A game management system that ensures that points are given according to the player's bet amount is provided. The game management system (100), which manages casino games played at a casino facility, consists of: an gaming table (4) for playing games with game tokens (9); a camera (2) that captures the bet game tokens (9) and acquires an image; a control device (50) that specifies the betting amount for each player position in the gaming table (4) based on positions, types, and numbers of the game tokens (9); and a point processing unit (612) that associates member ID of each player identified by the reader/writer device (5) and the bet amount of each player position identified by the reader/writer device (5), and records them in a recording device 62, wherein the point processing unit (612) gives the points according to the bet amount of each player identified by the reader/writer device (5).
