

CONTROL DEVICE, CONTROL METHOD, INFORMATION PROCESSING DEVICE,
INFORMATION PROCESSING METHOD, AND PROGRAM

ABSTRACT

In order to enable a user to produce a program by means of visible operations, a pairing unit pairs a user terminal and a basic core. A program production unit produces a program on the basis of touch operations by the user. An H parts supply unit and an S parts supply unit respectively supply H parts and S parts to the program production unit. A parts connection unit connects the various H parts and S parts in accordance with touch operations by the user. A program execution unit extracts from a program storage unit a program to be executed, and executes that program. A communication control unit transmits the execution result for the program executed by the program execution unit to the basic core via a second close-range communication unit.
