(54) Title: MODULAR FURNITURE ASSEMBLY

(57) Abstract: The invention relates to a modular furniture assembly that is convenient and versatile. One embodiment of the modular furniture assembly comprises a base and a transverse member manually, detachably coupled to the base by a coupler. The base and the transverse member have a defined spatial relationship which enables a variety of different types, configurations and sizes of furniture assemblies to be formed therefrom. Further, the base is configured such that the transverse member can be coupled to the base in a first position to form a first furniture assembly, and can be coupled to the base in a second position to form a second furniture assembly.
