ABSTRACT

A method of selectively isolating *Streptococcus sobrinus* alone out of oral streptococci including mutans streptococci, and a medium for selecting
5 *Streptococcus sobrinus* are developed.

A method of substantially isolating *Streptococcus sobrinus* alone by the addition of a monobactam antibiotic to a medium on which only oral streptococci including mutans streptococci can grow; and a selective medium for *Streptococcus sobrinus* prepared by the addition of a
10 monobactam antibiotic to a medium on which only oral streptococci including mutans streptococci can grow, are provided with.
