(54) Title: EXTENDABLE MODULAR JEWEL WITH SLOTTED ARMS

Fig. 2

(57) Abstract: The invention relates to a jewelry article (1) comprising a plurality of modular elements or arms (10, 10') reciprocally hinged in an oscillating manner around one or more hinging axes (100, each arm defines a central hinging area (11) that includes at least one seat (110) for engaging at least one connecting element (31) to connect additional arms. This central hinging area (11) is positioned between at least two additional lateral hinging areas (12, 13) located near the ends of the arm along its longitudinal direction (B) and are in turn equipped with lateral seats (120, 130) for engaging further connecting elements (32, 33). The seats (11; 12; 13) for engaging a connecting element (31; 32; 33) include through-holes or slots (110; 120; 130) between two defined openings on the opposed surfaces of the arm. The said connecting elements include articulation pins designed to engage in these through-holes, where the through-openings are shaped to have an oblong peripheral edge in at least one diametrical direction aligned along an elongation axis (A), and the through-openings have predefined lengths (D) which are preferably different among the various seats (11; 12; 13) present on each individual arm (10; 10').
