(54) Title: METHOD AND SYSTEM FOR EVENT DETECTION

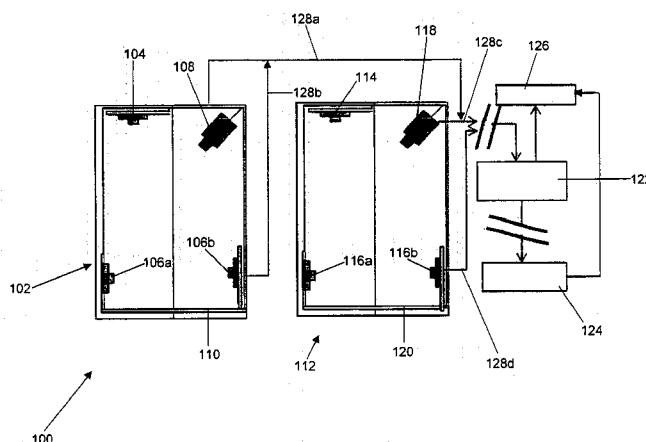

Figure 1

(57) Abstract: A method and system for event detection. The system comprising: a plurality of sensors; and respective classifier units coupled to the sensors for processing respective sensor signals from the sensors for the event detection; wherein at least one of the classifier units is adapted for detecting an event based on the sensor signal processed in said at least one classifier unit as a main evidence and for issuing sub-evidence queries to the other classifier units for facilitating the event detection.
