(54) Title: CONDITION DETECTION METHODS AND CONDITION DETECTION DEVICES

FIG 1

(57) Abstract: In an embodiment, a condition detection method may be provided. The condition detection method may include: acquiring a two-dimensional image including a person; computing a three-dimensional position of a pre-determined feature of the person from the two-dimensional image based on the assumption that a pre-determined component of the three-dimensional position has a pre-determined value; determining whether the computed three-dimensional position fulfills a pre-determined criterion; and determining a condition of the person on the two-dimensional image based on whether the pre-determined criterion is fulfilled.
