

ABSTRACT

Disclosed in embodiments of the present invention are a video data encoding method and device applicable to encoders, an apparatus, and a storage medium. The video data encoding method comprises: acquiring video data; configuring an encoding parameter of an encoder; determining, according to the encoding parameter, a first time interval between two adjacent video frames in a group of pictures; and encoding the video data according to the encoding parameter, and adjusting the number of video frames in the group of pictures according to the first time interval.
