

VERIFICATION CODE-BASED VERIFICATION PROCESSING METHOD AND APPARATUS

5

ABSTRACT

The present invention discloses a verification code-based verification processing method and apparatus. The method includes that: a server acquires verification code parameters required for generating a verification code; the server uses the verification code parameters as an input to a three-dimensional model to generate a three-dimensional image, wherein recognizable content corresponding to a specified visual focus position of a user is embedded in the three-dimensional image; and the server sends the three-dimensional image to a client terminal as a verification code for display.
